This study aims to explain the effect of workload on the performance of health workers with the status of Civil Servants at the Mayangan Jogoroto Health Center. This study uses a quantitative method which is carried out by distributing questionnaires to collect data. Respondents in this study consisted of 3 doctors, 17 midwives, 10 nurses. The data analysis technique used a simple linear regression analysis method. Based on the results of this study indicate that workload has a negative and significant effect on the performance of health workers with the status of Civil Servants at the Mayangan Jogoroto Health Center.
