The main goal of the company is to increase the value of the company which is the perception of investors towards the company which is often associated with the stock price, where the value of the company can increase wealth for shareholders. This study aims to determine the effect of Good Corporate Governance by using indicators of the board of commissioners, audit committee, management, institutional ownership. Profitability is measured by Return On Assets and firm value is measured by Price Book Value. This research is a type of quantitative research. The population in this study are banking companies listed on the Indonesia Stock Exchange for the 2018-2022 period, with a total of 42 companies. Based on the sampling technique with purposive sampling, a sample of 7 companies was obtained. The data analysis technique used is multiple linear regression analysis to answer the hypothesis. Data testing was carried out with the help of SPSS software version 26. The results of this study indicate that the Good Corporate Governance and Profitability variables have a positive effect on firm value.
